In the West, the bottom of the range is unchanged, while the top end moved three cents lower. For the mostly price series, the bottom end moved one cent higher, while the top end is unchanged. Demand is steady. No changes in dry whey production are reported this week. Manufacturers and traders note whey protein concentrate (WPC) 34% spot loads are extremely tight, along with strong demand for WPCs. This is keeping sweet whey from being more of a priority for some whey commodity manufacturers.
