

Agricultural Marketing Service
U.S. DEPARTMENT OF AGRICULTURE

**USDA – DAIRY
ACCEPTED EQUIPMENT LIST**

DECEMBER 2025

FORWARD

The equipment included in this listing has been rated acceptable for use in dairy plants surveyed and approved for USDA grading service.

The Dairy Grading Branch conducts design reviews and prototype inspections according to the regulations set forth in the General Specifications for Approved Dairy Plants and Standards for Grades of Dairy Products as outlined in 7 CFR 58.101 through 58.938, and the principles, guidelines, and criteria established by the 3-A Sanitary Standards Committees, and the *USDA Guidelines for the Sanitary Design and Fabrication of Dairy Processing Equipment*.

The general requirements for construction, repair and installation as outlined in section 58.128(a) reads as follows:

Section 58.128 Equipment and utensils.

- (a) General construction, repair and installation. – The equipment and utensils used for the processing of milk and manufacture of dairy products shall be constructed to be readily demountable where necessary for cleaning and sanitizing. The product contact surfaces of all utensils and equipment such as holding tanks, pasteurizers, coolers, vats, agitators, pumps, sanitary piping and fittings or any specialized equipment shall be constructed of stainless steel, or other materials which under conditions of intended use are as equally corrosion resistant. Non-metallic parts other than glass having product contact surfaces shall comply with 3-A Sanitary Standards for Plastic or Rubber and Rubber-Like Materials. Equipment and utensils used for cleaning shall be in an acceptable condition, such as not rusty, pitted or corroded. All equipment and piping shall be designed and installed so as to be easily accessible for cleaning, and shall be kept in good repair, free from cracks and corroded surfaces. New or rearranged equipment, shall be set away from any wall or spaced in such a manner as to facilitate proper cleaning and to maintain good housekeeping. All parts or interior surfaces of equipment, pipes (except certain piping cleaned-in-place) or fittings, including valves and connections shall be accessible for inspection. Milk and dairy product pumps shall be of a sanitary type and easily dismantled for cleaning or shall be of specially approved construction to allow effective cleaning in place. All CIP systems shall comply with the 3-A Accepted Practices for Permanently Installed Sanitary Product, Pipelines and Cleaning Systems.

It is Dairy Grading Branch policy to fully support the established 3-A Sanitary Standards Programs and to encourage equipment manufacturers, distributors, and the dairy plant and users to participate fully in the development and application of the 3-A Sanitary Standards and Accepted Practices. All equipment which fully complies with the criteria set forth in the applicable 3-A Sanitary Standards or 3-A Accepted Practice is accepted as meeting the requirements of the USDA General Specifications. This equipment listing is not intended to

include all equipment which complies with established 3-A Sanitary Standards or Accepted Practices. There may be instances, however, when such equipment is included in this listing in order to provide clarification about its use within dairy plants surveyed and approved for USDA grading service.

Equipment which is not covered by established 3-A Sanitary Standards or Accepted Practices will be reviewed by the Dairy Grading Branch utilizing requirements of Section 58.128 of *the USDA General Specifications* and *the USDA Guidelines for the Sanitary Design and Fabrication of Dairy Processing Equipment*.

As appropriate, regulations for the Food and Drug Administration (FDA), Department of Health and Human Services will be used to determine the suitability of component materials and processes with respect to public health concerns.

Equipment reviews and acceptances by USDA Dairy Grading Branch are separate and apart from any other USDA review process. Equipment designs submitted to and accepted by other USDA agencies are not transferable to Dairy Grading Branch.

These reviews are not intended as a USDA endorsement of the equipment's ability to function according to advertised statements or manufacturers claims of performance. The reviews are for sanitary design, fabrication and cleanability features only.

When a manufacturer's advertising references USDA acceptance, the correct terminology is "Model has been reviewed and accepted by the Dairy Grading Branch, USDA for use in dairy plants surveyed and approved for USDA grading service."
